### Select Database Edition

19c ORACLE Database

Which database edition do you want to install?

Enterprise Edition  
Oracle Database 19c Enterprise Edition is a self-managing database that has the scalability, performance, high availability, and security features required to run the most demanding, mission-critical applications.

Standard Edition 2  
Oracle Database 19c Standard Edition 2 is a full-featured data management solution ideally suited to the needs of medium-sized businesses.

Architecture

The diagram illustrates the Oracle Architecture, showing the relationship between the Database, Application Server, and Client.

This post is part I in two phases of the series on how to download and install Oracle Access Manager OAM 12c PS3 (12.2.1.3.0). In the second part, he covered how to create scheme using RCU and configure the OAM domain. What is OAM/IDM if you don't know the Oracle Access Manager (OAM) is the recommended Single Sign-on (SSO) solution for the management of web access and is used for authentication and the Coarse category authorization for both on-premise web applications and cloud. Oam is used to protect both Java & .net applications, including. Oam is part of Oracle Identity & Access Management Suite (IDM), for the list of all Oracle IDM products click here for the documentation of IDM 12cPS3 check my previous post here Highly speed installation steps install certified database for OAM & Fusion Infrastructure. For the list of certified databases, check the certification matrix here Install JDK Certified Oracle Fusion Middleware Infrastructure 12.2.1.3 Install Oracle Identity & Access Management Software 12.2.1.3 (Note: Make sure that IDM & FMW The software is installed in the Same Oracle Home) creates scheme using repositioning utility (RCU). We will use 12c RCU which comes as part of Fusion Middleware Infrastructure installs in a previous step. For the 11g version of RCU, check here Create Weblogic Domain Administration Server and server managed for Oam Start Weblogic Admin & Managed Server Test OAM Console Prerequisite at least 16 GB of Physical Memory & Oracle Enterprise Linux 6.6 or subsequent versions of Certificate Database Operating System Database User's credentials as Oracle (this user possesses the IDM software) The credentials of the user of the SYS database (required to create the scheme using RCU) Oracle Java Development Kit (JDK) 1.8.0\_131 or subsequent versions (CLICK HERE TO DOWNLOAD) elcarO elcarO, ottdorP Jerciracs rep iuq accilC (0.3.1.2.21 elcarO osseca enoitseG Jerciracs rep iuq accilC (0.3.1.2.21 erurtursarfnI eraweldidM noisuF and Access Management 12cPS3 (12.2.1.3.0) Assumption ORACLE\_HOME=/u01/app/oracle/product/12.1.0.2/db\_1 You must install the Fusion Infrastructure(Weblogic Server) & Oracle Access Manager software in the same ORCALE\_HOME directory (We are going to install under /u01/app/oracle/oam12c) Low-Level Installation Steps Step 1: Operating System, Database & JDK Installation Make sure your operating system, Database, JDK (Above jdk1.8.0\_131+) are as per the OAM 12c Certification matrix: Step 2: Install Oracle Fusion Middleware Infrastructure Note: This step will install WebLogic, Coherence, RCU and other required software for OAM. 1. Use the terminal window and run the Oracle Fusion Middleware Infrastructure fmw\_12.2.1.3.0 installers as the oracle user. In my case installer is located in the /stage/oracle/fusion\_infra/12.2.1.3.0 directory. Note: Make sure you set the environment variables as (In my case JDK 1.8.151 is installed under /usr/java) export JAVA\_HOME=/usr/java/jdk1.8.0\_151 export PATH=\$JAVA\_HOME/bin:\$PATH The installer starts, and after a few seconds the cAAAFusion Middleware 12c Infrastructure Installation window appears. 2. On the Welcome screen, click Next. 3. On Auto Updates screen, select Skip Auto Updates and click on Next. 4. On Prerequisites Checks screen, once 100% complete then click on Next. 5. On Installation Summary screen, click Install. (Make sure you check the Oracle Home Directory Location) Note: You can also save Response File by clicking a button at the bottom, this response file can then be used as a template for silent install. 6. On Installation progress screen, let it complete to 9. after a while, the installation progress ends and the last full installation window appears, informing that the installation has been successful step 3: install nowcile access management 12c 1. start a terminal window like oracle and run the Oracle 12.2.1.3.0 access installer as the oracle user. in my case, installer is located in the directory /stage/oracle/oam/12.2.1.3.0/idm 2. in the welcome screen, click ahead 3. in the Auto Updates screen, select skip software updates and click on (you prefer to download and apply updates separately) 4. Enter Oracle Home =/u01/app/oracle/oam12c and click next note: make sure to install oam in the same house oracle as and oracle fusion middleware infrastructure in the previous stage 5. in the installation type screen, select placed oracle identities and access managers (managed via weblogic servers) and click next note: another on standalone vs placed idm in future post 6. On prerequisite check the screen make sure all complete controls correctly and click on ahead 7. in the installation summary screen click install 8. installation progress will begin. when it reaches 100 % click on ahead 9. in the full installation screen, click the end. create schema & domain next is to create schema for oam & configure weblogic domain in the i part of this series post correlate overview of products oracle identity & access management (oam, oim, oid, oud, oes, oif) console in oam: console oam, weblogic console & em oid panoramic: ods, weblogic & em free Mini-Course over email on idm (OID/OAM) pad program for idm (OAM/OID): architecture, install, configure, integrate, has, dr, troubleshooting etc step-by-step activity you need to perform to become In IDM Next Task for You if you like this and you want to learn Oracle Identity & Access Management then get a free mini-course up from here If you are looking for commonly asked interview questions for Oracle Access Manager, click below and get that in your inbox. This document will help you configure Oracle as an identity provider (IDP) making Drupal your service provider (SP ). Following these steps you will be able to configure SAML SSO between Oracle and your Drupal site so that your users will be able to access your Drupal site using their Oracle credentials. Active support 24/7: If you address any problem or if you have any questions, please feel free to contact us at drupalstupport@securify.com In case you want some additional functions to be included in the form, please get in touch with us, and we can get that tailored to you. Also, if you are looking for another SAML identity provider, click here to check the step-by-step guides for other identity providers. Installation of miniOrange Drupal Module SAML SP: Using Composer: For Windows: the composer requires drupal/miniorange-saml For Linux: the composer requires drupal/miniorange-saml Go to the Drupal site and run the update script using this URL: [BaseURL]/update.php Navigate to the Extend -> Module search -> Select the module -> Click the install button. Configure the form to [BaseURL]/admin/config/people/miniorange-saml/idp-setup Manual installation: Go to the Extend menu on the Drupal administration console and click Install new module. Install the Drupal SAML 2.0 Single Sign On - Service Provider Module or download the package zip or URL (tar/zip.) Click Enable new modules, this module by checking the check box and clicking the install button. Configure FormConfigure Drupal as Service Provider (SP) In the Drupal SAML SP module, go to the Services Provider Setup tab. There are three ways to configure the module: Uploading Oracle Access Manager Metadata File: click Upload Metadata URL button. Load the metadata file and click Charge. From Oracle Access Manager Metadata URL: Click Charge Metadata URL. Insert Metadata Provider, click Set Metadata. Manual configuration: Provide the required settings (i.e. Name of the identity provider, IDP or Issuer input ID, SAML access URL, X.509 certificate and save it. Name of the identity provider Enter your IDP name. For example: Oracle Access Manager (Any) IDP Entity ID or Issuer You can find EntityID in your IdP-Metadata XML file enclosed in EntityDescriptor tag having attributed as entityID. SAML Login URL page You can find the SAML access URL in your IdP-Metadata XML file enclosed in SingleSignOnService tag X.509 Certificate Enter your name IDP For example: Oracle Access Manager (Any) You can find the value of the X.509 certificate in the IdP-Metadata file enclosed in x509 certified tags To get Drupal SP metadata you need to provide while configuring Oracle Access Manager Suite Federation as IDP, please do the following steps: Go to the Module Service Provider Metadata tab and click the metadata URL and save metadata in a local file as spmetadata.xml (you can enter any name). Enable the Identity Federation in OAM Admin Console Run the following steps to enable Oracle Access Manager Federation: Go to the OAM Admin console in a browser. The URL is of the module: adminport/oamconsole Authenticate using OAM Admin user credentials. From the launch pad Navigate to: Configuration -> Enable the Identity Federation. To configure the IDP step: If necessary, copy the metadata file (spmetadata.xml) obtained from Drupal SP to the environment in which the IDP is configured. Go back to the browser page containing the OAM console, where you enabled the Federation. We will increase again if necessary. Navigate to the Launch Pad -> Identity Federation -> Identity Provider Administration -> Click Create Partner Service Provider. 6. Enter a name like Drupal SP (You can enter any name). 7. Make sure the partner is selected. 8. Select SAML 2.0 as a protocol (which is the default). 9. Select Charge from Metadata Provider and click Charge Metadata and upload the Drupal SP metadata (spmetadata.xml) you copied from Drupal SP UI. 10. Specify NameID format settings. What you specify depends on which attribute you use to define the user. If you define the user from the email address, use the email address as a format. Configure settings as follows: a) Select Email Address as the Name ID format b) Select the user ID as the ID name c) value) Enter the user attribute in the logging of the user LDAP containing the user's email address. For example, if Oracle Internet Directory or Oracle Unified Directory is the User Data Store, the attribute is the mail. d) Click Save. 11) Click the Identity Provider Administration tab within OAM Console and under the partners of the Research Service Provider click Search to make sure you can view Drupal SP (or your SP name). To complete the test, proceed as follows: Return to the Drupal SP browser window containing the Services Provider Setup tab. Click the Test Configuration button to check whether the configuration is successful or not. To make SSO make sure:elibissop A otucisonoc amelborp nusseN :anigap allod otatS .oludom led oizivres id erotinrof led enoizargufinoc id adehcs al ottos ^A enoizpo atseuQ .atatiliba ersesse vedL MAS enoizpP noc idecca
